

# @enterprise

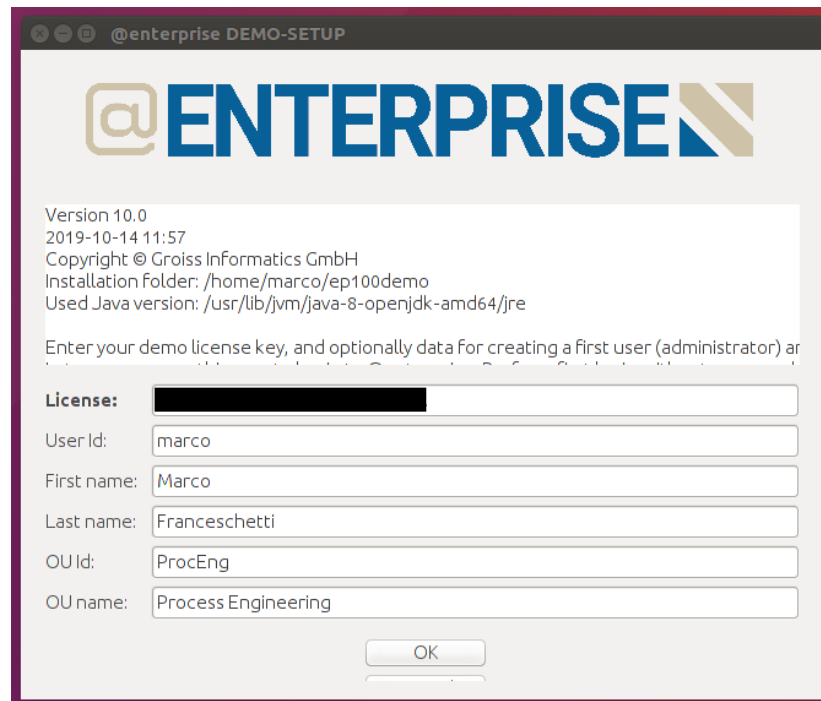

Quick and minimal step by step guide to get started

# Requirements

- Windows, Linux, OSX
- 512MB memory, 200MB disk space
- JDK 1.8
- A Web browser
- A license key and the demo setup file from [here](#)
  - You need to register
  - Demo license lasts 30 days

# Installation

- Execute install100.jar
- Insert the license key, user information, and organizational unit

The screenshot shows a window titled "@enterprise DEMO-SETUP". At the top is the @ENTERPRISE logo. Below the logo, the following text is displayed:

Version 10.0  
2019-10-14 11:57  
Copyright © Groiss Informatics GmbH  
Installation Folder: /home/marco/ep100demo  
Used Java version: /usr/lib/jvm/java-8-openjdk-amd64/jre

Below this text is a prompt: "Enter your demo license key, and optionally data for creating a first user (administrator) ar".

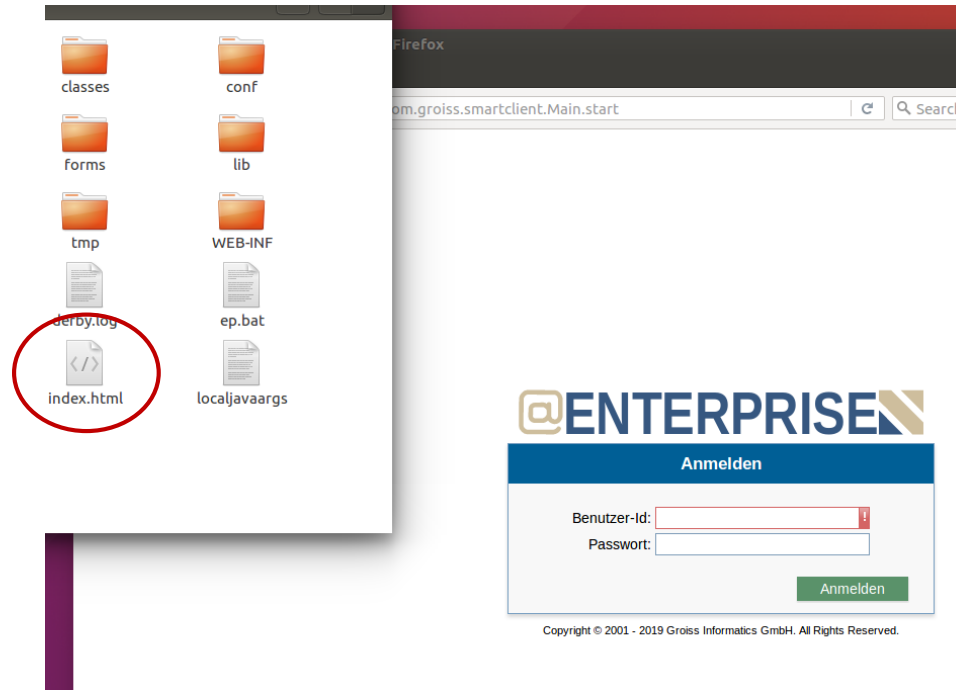

The form contains the following fields:

- License:** A text field with a blacked-out license key.
- User Id:** A text field containing "marco".
- First name:** A text field containing "Marco".
- Last name:** A text field containing "Franceschetti".
- OU Id:** A text field containing "ProcEng".
- OU name:** A text field containing "Process Engineering".

At the bottom right of the form is an "OK" button.

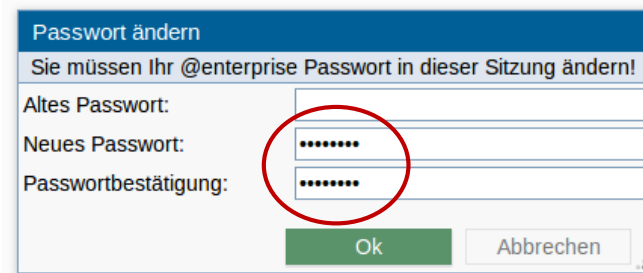

# Final steps - 1

- Open the index.html file in the ep100demo folder
- Login with the user id you set in the installation phase – no password!

# Final steps - 2

- Set a new password for your user and confirm it
- Leave the Altes Passwort field empty!

Passwort ändern

Sie müssen Ihr @enterprise Passwort in dieser Sitzung ändern!

Passwortbestätigung:

Ok Abbrechen

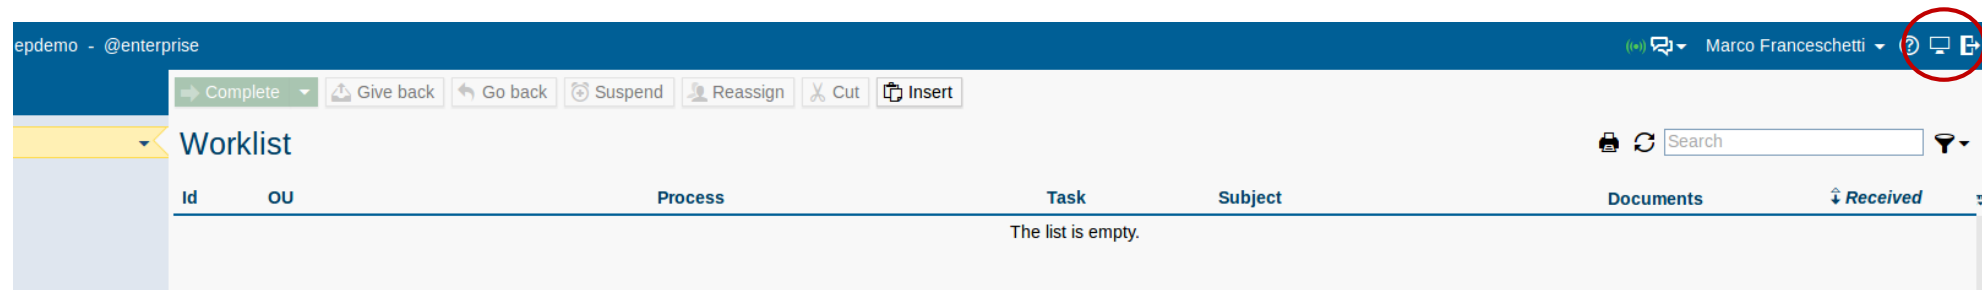

# Final steps - 3

- Click on your user name > Einstellungen > Sprache > Englisch
- Save and close: the interface will reload after clicking Ok

# Switching to the Administration Interface

- Click on the screen icon at the top right corner
- Login with your credentials – you are also an administrator
- From here on, follow the video tutorials in Moodle

# Get Restarted - How was it for running @enterprise?

- Go to the installation directory
- Execute ep.bat
- Open index.html
- Or open your favorite Web browser and go to  
<http://localhost:8000>
- You might have to give it some seconds to get started before trying to reach the Web interface
